**BOTOX® (onabotulinumtoxinA)**

**Injection Needle**

**Disposable Hypodermic Needle Electrode With Luer Lock Hub**

**General Description**

The BOTOX® Injection Needle is a sterile, disposable, monopolar needle electrode with attached lead wire. The needle shaft is insulated so the needle records signals received only from the tip. The needle hub is designed to allow for precise manipulation of the electrode. BOTOX® Injection Needles connect to standard disposable syringes or Luer Lock.

The lead wire is flexible and permanently attached to the hub of the needle, so motion does not interfere with the injection process. The BOTOX® Injection Needle should be used with an EMG amplifier.

**Indications and Usage**

The BOTOX® Injection Needle is specially designed to be used in conjunction with the Signal Amplifier for BOTOX® (onabotulinumtoxinA) and other EMG machines. It is used to locate EMG activity or electrically stimulate while allowing injection.

Connect the black plug into the black input jack. Connect a reference electrode to the red input jack and a ground electrode from the patient’s skin to the green input jack. Frequently, the reference and ground electrodes are combined into a single bar electrode assembly.

After use, discard unshielded needles and syringes in approved sharp containers. (in the U.S.A. follow CDC guidelines)

**Warnings**

Insertion of needles and injection of drugs into the human body is hazardous and should only be undertaken by surgeons familiar with the anatomy and with the details of the particular clinical case. For ophthalmic use, these needle electrodes will help localize injection; however, they do not remove the hazard of perforation of the globe or of injury to the optic nerve or other important structures in the orbit. The BOTOX® Injection Needle is sterile unless the pack is damaged or opened.

**How Supplied**

The BOTOX® Injection Needle is supplied as four individual sterile units.

The BOTOX® Injection Needle is a single use device, and is sterile unless pack is damaged or opened. It is sterilized by Gamma irradiation.

Do not attempt re-sterilization.

**Precautions**

If the BOTOX® Injection Needle is received opened or in defective condition, please contact Allergan Customer Service at 1.800.890.4345. Each pack is identified by a lot number, and this number is to be included in any correspondence. Do not use the BOTOX® Injection Needle after the expiry date.

**Storage**

The BOTOX® Injection Needle has to be stored at room temperature and out of reach of children.

Caution: Federal U.S.A. law restricts this device to sale by, or on the order of, a licensed physician.
