JUVÉDERM® is the only hyaluronic acid dermal filler developed using the proprietary Hylacross™ technology, an advanced manufacturing process resulting in a malleable gel that flows easily into the skin and creates a smooth, natural look and feel. All other hyaluronic acid dermal fillers currently on the market in the U.S., including Restylane® and Perlane® are granular consistency gels. An example of the granular consistency of Restylane® and Perlane® (under 2.4X magnification, 0.05 mL) can be seen in the accompanying photo and can be compared to JUVÉDERM® Ultra and JUVÉDERM® Ultra Plus (under 2.4X magnification, 0.05 mL). The clinical significance of the differences has not been established.

Important JUVÉDERM® Safety Information

JUVÉDERM® injectable gel (including JUVÉDERM® Ultra, JUVÉDERM® Ultra Plus, JUVÉDERM® Ultra XC, and JUVÉDERM® Ultra Plus XC) is indicated for correction of moderate to severe facial wrinkles and folds (such as nasolabial folds).

Treatment side effects are usually mild to moderate, lasting 7 days or less, and include temporary injection-site reactions such as redness, pain, firmness, swelling, and bumps. JUVÉDERM® is not for people with severe allergies.

For more information, please click on the About Safety link at www.juvederm.com or call the Allergan Product Support line at 1-877-345-5372. JUVÉDERM® injectable gel is available by prescription only.
